Get vaccinated against COVID-19

Facts about the vaccines:

- The vaccines are approved for everyone aged 12 and older – and also for pregnant and breastfeeding women.
- It is important to be vaccinated even if you have previously been infected. This will offer you the best protection.
- There are two different vaccines: One from Moderna and one Pfizer BioNTech. They are equally good, safe and effective.
- You need to be vaccinated twice. This will offer you the best protection.

Get vaccinated without an appointment

It is easy to get vaccinated. You can show up at all vaccination centres without making an appointment first.

The Danish Health Authority recommends that you get vaccinated because:

- the vaccines protect you from becoming severely ill from COVID-19
- you protect your family, friends and others from becoming infected
- vaccination is crucial for us to control the epidemic.

Is it safe to get vaccinated?

All vaccines cause side effects, including the COVID-19 vaccines. They will mostly be mild side effects that go away quickly. These can be fever or pain at the injection site.

Contact your doctor if you experience serious symptoms after you have been vaccinated. These can be breathing problems or a skin rash. However, this very rarely happens

How your vaccination takes place

Show up at the vaccination centre. Remember to bring your yellow health insurance card.

It is a doctor who is responsible for your vaccination.

Most people are vaccinated in the upper arm.

After your vaccination, you need to wait 15 minutes at the centre, so you can receive help if you have an allergic reaction.

Questions?

You can always find the latest information about the vaccination against COVID-19 on our website. See more at <https://www.sst.dk/en/English/Corona-eng/Vaccination-against-COVID-19>. You can also follow us on Facebook, where we will keep you updated on coronavirus and vaccinations.
